

Targeted Monitoring – 2025 Monitoring Year 2025 CIM Cohort – Targeted Levels 1 and 2

CIM Step 2–Investigate: Prioritization (required)

Description

Prioritization is a required activity for all Targeted LEAs participating in CIM Step 2. The LEA will prioritize the data-supported and quantified problem areas identified in the Step 1 Consolidation/Problem Areas activity and then determine which of those problems areas it will later explore for Root Causes.

LEA Required Tasks

Targeted Level 1 and 2 LEAs

- List from highest priority to lowest priority the data-supported and quantified problem areas identified in CIM Step 1, Consolidation/Problem Areas.
- List the problem areas the LEA intends to explore for Root Causes and explain why the LEA prioritized those problem areas above all others. If the LEA is identified as Disproportionate, at least one problem area to be explored for Root Causes must relate directly to Disproportionality.
- Submit documentation of the above to the SELPA by **October 10, 2025**.
